

BUILD IT RIGHT - Keep Your Home Warm, Dry & Affordable

Starting a new construction project?

Renovating your home?

Managing DIY home repairs?

Did you know that Vermont has a minimum standard of energy efficiency requirements for all new and renovated single family and multi-family homes?

The Residential Building Energy Standards (RBES) ensure that Vermonters benefit from a more comfortable, healthy and cost-effective way to heat (and cool) their home.

- ☐ **Save \$\$ - reduce utility bills and avoid ongoing expensive repairs**
- ☐ **Be warm & dry - make your home more comfortable and weather-resistant**
- ☐ **Stay healthy - improve indoor air quality and avoid mold issues**
- ☐ **Get \$\$ - qualify for incentives and rebates**
- ☐ **Help protect the environment for your family - reduce fossil fuel pollution**

Additional assistance for income-qualifying homeowners is available.
